                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          A fragment encoding the human Stat91 protein was used to screen a murine thymus and spleen cDNA for homologous proteins. A highly homologous gene (given in AAC89338) was isolated that encoded a 91 kDa protein (AAR72080) (Stat1) that was responsive to interfer gamma. Using a fragment of the mouse gene as probe, 2 additional members of the 113-91 family of receptor recognition factor proteins were isolated. The 2 genes (AAC89339-40) were cloned in plasmids 13sf1 and 19sf6 and encoded proteins termed Stat4 (AAR72081) and Stat3 (AAR72082), respectively.

                                                                                                                                                            followed by nuclear translocation and DNA binding to activate transcription. Recombinant STAT4 can be obtd. using cDNA clone 19sf6 (AAT31278) obtd. from splanic/thymic cells. STAT4 includes a DNA-binding domain (see also AAW03167) capable of both receptor recognition and message delivery via DNA binding in a receptor-ligand specific manner. STAT proteins and their DNA binding domains (see also AAW03165-75) are useful for screening antagonists used to inhibit STAT-mediated signal transduction
                                                                                                                                                                                                                                                                                                                              New STAT protein DNA-binding domain peptide(s) - useful for diagnosing, preventing or treating cellular dysfunction, e.g. oncogenesis, inflammation, parasitic disease or autoimmunity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Key
Domain
                                                                                                                             Sequence

The present invention relates to a crystal of an N-terminal frayment of a signal transducer and activator of transcription (STAT) protein. The crystal effectively diffracts X-rays, allowing the determination of the atomic coordinates of the N-terminal domain to a resolution of greater than 5.0 Angstroms. The present sequence is the N-terminal domain of the murine STAT 3 protein. The N-terminal domain enables STAT dimers to interact and bind DNA cooperatively, a mechanism important for gene activation. The crystals are useful in drug screening and development by selecting a potential drug by performing rational drug design with the 3-dimensional structure determined for the crystal.
                                                                                                                                                                                                                         WPI;

The sequence represents a mouse acute phase response factor (APRF), a transcription factor related to signal transmission of interleukin-6 (II-6). The protein is encoded by a cDNA, isolated from a mouse liver cDNA library using a polymerase chain reaction product (amplified using primers derived from an IL-6-treated mouse liver peptide) as a probe. ARRF-inhibitors, e.g. antibodies, antisense oligonucleotides or ribozymes, may be used to treat diseases induced by IL-6, e.g. inflammatory disease, leukemia, cancer, osteoclasia, pulmonary hypertension, etc.
                                                                                                                                                                                                                                                                                                                                                                             Mouse; acute phase response factor; transcription factor; interleukin-6; signal transmission; liver; antibody; antisense; ribozyme; antiinflammatory; antitumor; hypotensive; therapy.

       associated proteins represented in AAB58106 - AAB5848 Lung cancer associated proteins and polynucleotide sequences, their agonists, and antagonists may have neuroprotective; cytostatic; cardioactive; immunomodulatory; muscular active general; vulnerary; gastrointestinal general; nephrotropic; antiinfective; gynecological; or antibacterial activity. The invention also includes antibodies specific for the protein or polynucleotide sequences. The lung cancer associated polynucleotide sequences may be used for detection of lung cancer, chromosome identification, as chromosome markers, and for numerous othe diagnostic or research purposes. The proteins may be used to treat

The proteins may also be used in the treatment of wounds and infectious diseases. Polynucleotide sequences AAF18425 - AAF18433 and peptide AAB58549 are used in the course of the invention for the identification and characterisation of the polynucleotide and protein

                                                                                  STAT dimer. The core portion comprises a coiled-coil domain comprising 4 long helices, a DNA binding domain which contains an immunoglobulin-like fold, a C-terminal SH2 domain and a domain that links the DNA binding and SH2 domains. The crystal is of sufficient quality to perform x-ray crystallography studies. Methods of preparing the crystalls are included in the invention. Knowledge of the STAT protein's 3-dimensional structure will aid in structure-based drug design. The crystal can be used in drug screening assays to identify agonist and antagonist compounds. Antagonists can be used to treat inflammation, allergy, asthma and leukaemia, and agonists to treat anaemia, neutropenia, thrombocytopenia, cancer, obesity, viral diseases, growth retardation, and other conditions characterized by insufficient STAT activity.
                                                                                                                                                                                                                                                 The present sequence is that of human signal transducer and activator of transcription 3 (STAT). The invention provides a crystal of a core portion of a STAT protein in dimer form with an 18-mer duplex DNA (see AAAB9233) that contains a binding site for the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Homo

The protein is expressed from a human placenta cDNA, isolated using an IL-6-treated mouse liver cDNA probe. APRF-inhibitors, e.g. antibodies, antisense oligonucleotides or ribozymes, may be used to treat diseases induced by IL-6, e.g. inflammatory disease, leukemia, cancer,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New acute phase response factor -

This Stat3 fragment showed very weak binding to c-Jun protein in the cell extract.

The invention relates to methods for identifying interacting regions of transcription factors and methods for identifying agents which modulates the interaction between a transcription factor such as c-Jun and a Stat protein such as Stat-1 and Stat-3, useful for modulating gene transcription e.g., cellular transformation. These identifying agents are used in the treatment of dysproliferative diseases and also for treating cancer and psoriasis. A Stat protein comprises the N-terminal domain, DNA binding domain, linker domain, SH2 domain and transformation, linker domain, SH2 domain and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      identifying an agent transcription factor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AAY72842

                                           The sequences of cDNA encoding receptor regonition factors having mol.wt. of 113 kDa (Stat113), 91 kDa (Stat92) and 84 kDa (Stat84) are given in AAQ89335-37 and the deduced amino acid sequences of STAT proteins in AAR72077-79. These ISGF-3-derived proteins are activated by binding of interferon-alpha (all 3 Stat proteins) on interferon-gamma (Stat91) to cell receptors.
                                                                                                                                                                                                                                                                Receptor recognition factor implicate stimulation of genes - useful in drifor treating cellular debilitations, dysfunctions, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Signal transducer and activator of transcription; ISGF-3; STAT; Stat91; receptor recognition factor; transcription factor; cellular debilitation; derangement; dysfunction; interferon-alpha;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAR72078 standard; Protein; 750

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Signal transducer and activator of transcription (STAT) protein STAT1-alpha (AAW03168), also known as STAT91, is a 91 kDa protein having a dual purpose, i.e. signal transduction from ligand-activated receptor kinase complexes followed by nuclear translocation and DNA binding to activate transcription. Recombinant STAT1-alpha can be obtd. using an isolated cDNA clone (AAT31276). STAT1-alpha includes a DNA-binding domain (see also AAW03165) capable of both receptor recognition and message delivery via DNA binding in a receptor-ligand specific manner. Maximum STAT1-alpha activation of genes requires phosphorylation of both Tyr-701 and Ser-727. AAW03169-76) are useful for screening antagonists used to inhibit STAT1-mediated signal transduction and activation of transcription.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New STAT protein DNA-binding domain peptide(s) - useful for diagnosing, preventing or treating cellular dysfunction, e.g oncogenesis, inllammation, parasitic disease or autoimmunity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Disclosure; Page 69-73; 138pp; English.

The Stat proteins and fragments can be used to identify antagonists and agonists of Stat function. Antagonists can be used to treat e.g. inflammation, allergy, asthma and leukaemias, and agonists can be used in the treatment of e.g. anaemias, neutropaenias, thrombocytopenia, cancer, obesity, viral diseases, growth retardation or other diseases characterised by insufficient Stat activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This is human Statl-alpha protein. The invention describes methods of producing milligram quantities of 3 forms of purified Statl protein: Statl-alpha and Statl-beta (see AAW62995) from baculovirus-infected insect cells, and Statlic (see AAW62996) from E. coli. Statl-alpha has an N-terminal compact domain that enhances the DNA binding of the Stat protein. The Tyr-701 residue is phosphorylated in vivo. In vitro phosphorylation of the protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This is human Statl-alpha process.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                οy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             В
       The present sequence is that of human signal transducer and activator of transcription 1 (STAT-1). The invention provides a crystal of a core portion of a STAT-protein in dimer form with an C crystal of a core portion of a STAT protein in dimer form with an C la-mer duplex DNA (see AAA89233) that contains a binding site for the STAT dimer. The core portion comprises a coiled-coil domain comprising 4 long-helices, a DNA binding domain which contains an immunoglobulin-like fold, a C-terminal SH2 domain and a domain that links the DNA binding and SH2 domains. The crystal is of sufficient quality to perform X-ray crystallography studies. Methods of preparing the crystals are included in the invention. Knowledge of the STAT protein's 3-dimensional structure will aid in structure-based carug design. The crystal can be used in drug screening assays to identify agonist and antagonist compounds. Antagonists can be used to treat inflammation, allergy, asthma and leukaemia, and agonists
                                                                                                                                                                                            Claim 1; Column 41-44; 206pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                          detect, treat or prevent pancreafic disorders, especially cancer.

Agonists and antagonists to the antigens can be screened for The pancreatic cancer antigen polynucleotides can be used to design nucleic acid hybridisation probes that can be used in chromosome mapping, linkage analysis, tissue identification and/or typing and a variety of forensic and diagnostic methods. The proteins can be used to generate antibodies which are used to purify, detect and target the polypeptides, including both in vivo and in vitro diagnostic and therapeutic methods. The proteins can be used to treat or prevent neural, imune system, muscular, and the proteins can be used to treat or prevent neural.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     gynaecological, cardiant and antiinflammatory activities, and can be used in gene therapy. The polynuclectide and proteins can be used for preventing, treating, or ameliorating a medical condition or in assays for diagnosing a pathological condition or a susceptibility to one in a subject. Binding partners to the proteins and the activity of the proteins can be identified. The pancreatic cancer antigens can be used to
                                                                                                                                                                                                                                                                                                                                                                     reproductive, gastrointestinal, pulmonary, cardiovascular, renal or proliferative disorders. AAC99232 to AAC99240 and AAB54467 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AAC98773 to AAC99231 encode the human pancreatic cancer associated proteins, called pancreatic cancer antigens, given in AAB54008 to AAB54466. The human pancreatic cancer antigens have cytostatic, neuroprotective, nootropic, immunomodulatory, relaxant, contraceptive,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New nucleic acid that is a pancreatic cancer antigen for preventing, treating, or ameliorating a medical condition, particular pancreatic cancer, or for use in assays for diagnosing a pathological condition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              antiinflammatory; cardiant; gene therapy, chromosome mapping; linkage analysis; tissue identification; tissue typing; forensic neural; immune system; muscular; reproductive; gastrointestinal; pulmonary; cardiovascular; renal; proliferative.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; pancreas; pancreatic cancer; pancreatic cancer antigen; detection; diagnosis; identification; cytostatic; neuroprotective; nootropic; immunomodulatory; relaxant; contraceptive; gynaecological;

These ISGF-3-derived proteins are activated by binding of interferon-alpha (all 3 Stat proteins) or interferon-gamma (Stat91) to cell receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Receptor recognition factor implicated in transcriptional stimulation of genes - useful in drug screening assays and/or treating cellular debilitations, derangements and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence
